

Patient:

1. As the patient I want to avoid getting calls from my emergency contact asking me the same question every day because it interrupts my routine and generally just annoys me.
2. As the patient I want to prove to everyone that I am NOT losing my mind and forgetting things like they think I am because it makes me feel like they don't trust me.
3. As the patient I want to keep my same routine every day and not have to deviate from that to please other people because I know what I want to do and I don't want to be bothered.

Emergency contact:

1. As the emergency contact I want to know the patient is taking their medication as prescribed so that I don't have to worry about them passing away.
2. As the emergency contact I want to stop pestering the patient all day because it gives them a reason to be grumpy and rude and it takes time away from the fun conversations we could be having.
3. As the emergency contact I want to be courteous of my own time by being alerted when/if the patient has missed important medications so that I don't risk my job/time by having to leave work/home to check on them.

Healthcare provider:

1. As the provider I want to set up a system for my patients to remember to take their medications so that my work as their doctor doesn't stop as soon as they leave my office
2. As the provider I want to use a system that is easily understood by my medical staff and requires zero effort from me and minimal effort for them, thereby saving manhours, time, and money.
3. As the provider I want to be able to track when/if my patients have missed their medications so that I can be sure my practice as their doctor is working for them and that their medication schedule is optimized for their daily routine.
